Latest Nat Cat event "Supercel" Zuidoost Nederland juni 2016

Persbericht

Nov. 2016: > Eur 675 mln

Den Haag, 28 juli 2016

Schade hoos- en hagelbuien: zeker 500 miljoen euro

De extreme hoos- en hagelbuien die eind juni grote delen van Nederland teisterden, in het bijzonder de regio's Zuidoost-Brabant en Midden-Limburg, hebben een verzekerde schade veroorzaakt van minimaal 500 miljoen euro aan woningen, auto's en (agrarische) bedrijven. Dat blijkt uit een eerste inventarisatie van het Centrum voor Verzekeringsstatistiek (CVS) van het Verbond van Verzekeraars. De verzekerde schade kan nog oplopen. Door de uitzonderlijke omvang zijn verzekeraars nog bezig met de inventarisatie en afhandeling van claims, vooral in het zakelijke segment.

De cijfers betreffen alleen schade waarvoor gedupeerden verzekerd zijn. De totale schade ligt nog hoger omdat niet iedereen – vooral in de landbouw – zich verzekerd heeft tegen deze vormen van weerschade. Een eerste inventarisatie van de particuliere schade (personenauto's, caravans, woonhuizen) komt uit op 325 miljoen euro, waarvan 40 procent schade aan woonhuizen betreft. De verzekerde zakelijke schade komt volgens de huidige inzichten uit op 175 miljoen euro, waarvan het grootste deel in de agrarische hoek zit. Met name deze zakelijke schadepost kan nog verder oplopen.

Hoosbuien juni 2016: 500 miljoen particuliere schade, 175 miljoen zakelijke schade, 100.000 claims

Conclusion claims events up to 2016

- Storms and hail cause a lot of damage in a short period of time.
- Rain can cause major damage depending on intensity and duration.
 Rain damages show an increasing trend.
- General trend is an increase in NatCat events.
- Mega storm NL (return period 250 years)

4 KNMI Scenario's

- All scenario's show an increase in precipitation in all seasons, except summer.
- Extreme rainfall intensities will occur increasingly occur during the whole year.
